Brighton, MI 48116

We Want You To Love Your New Permanent Makeup Service!

Aftercare Instructions

- After 24 hrs, wash the area with tepid water and gentle soap. You may use clean fingertips or a cotton swab.
- Apply a thin layer of the provided ointment to the procedure area using clean fingers or cotton swab.
- Apply the ointment at least 2 times per day or whenever the area feels dry for 7-10 days.
- Cool compresses will assist in reducing swelling. Assure a barrier such as a clean thin washcloth is used between your skin and the ice. Ice can be left on for 15-20 minutes at a time, 4-6 times per day.

YOU are the most important factor in the healing process!

- The color will be several shades darker during the days following the procedure and may take several weeks before the final color is achieved. DO NOT PANIC!!!
- Do not apply makeup for 72 hrs near the procedure area. New eye makeup should be used after the eyeliner procedure. No eyelash curlers for 2 weeks.
- Swelling is completely normal and may cause the design to be distorted.
- Scabbing may occur 2-3 days after the procedure. Do not pick as this will pull the pigment out.
- Wash hands thoroughly before touching the procedure area. Your Permanent Makeup tattoo has broken your natural barrier leaving it susceptible to infection.
- Sunlight will fade your tattoo, protect new tattoos with sunglasses, hats or visors. Using a higher SPF sunscreen is a must after the tattoo heals.
- Avoid tanning, pools, hot tubs, saunas, lakes and oceans. No submerging area in water for at least two weeks post-procedure.
- Put clean sheets and pillowcases on your bed. Avoid sleeping on your stomach until the color is healed in.
- Consult with your doctor on using an OTC anti-inflammatory medication to assist with pain relief and swelling for a few days post-procedure.

Permanent Makeup Care Instructions

Continued...

Long Term Care Instructions

- Protect your investment from the sun. Wear hats, visors, sunglasses and use a SPF sunscreen.
- In Michigan tattoo facilities are strictly regulated therefore you should not have to wait a year after a procedure to donate blood. Be sure to include the procedure on your paperwork and discuss with your intake worker when Donating.
- There is much controversy regarding tattoo pigments and MRI machines. Be sure your physician and the MRI technician is aware of your Permanent Makeup Procedure.
- Note that chemical peels, exfoliants, products used for Acne, Anti-aging products (Retin A, Glycolic/Lactic Acids, AHA, ect) can adversely affect your permanent make-up. Unless you are a great label reader a product containing an unwanted substance may end up in your cabinet. Avoiding the area of your permanent make-up is the only assured way to protect it from products.
- Laser treatments done near your permanent makeup can drastically lighten the Color.
- The average person will need a touch up every 3-5 years. Many factors such as lifestyle, skin type/tone, products used, medications and sun exposure will affect the time between touch-ups.
- Microblading usually requires a touch up every 12-18 months. This is because finer hand strokes are used which are usually not in quite as deep into the dermis as with a tattooing machine.
